Currently Unavailable

- Option to save and load Loupedeck user profiles
- Speed/Sensitivity override for dials
- Loupe/Grid -view toggle on Library Module
- Hide Panels -feature (FN + Full Screen)
- Online user guidance when customizing controls

Known issues (Lightroom):

- Scandinavian keyboard layout:
    - Rotate image left/right 90º unavailable
    - Changing Brush tip size unavailable
- If the Loupedeck Software doesn't connect to Adobe Lightroom Classic CC:
    - Stop Loupedeck software from task/menu bar
    - Start Lightroom
    - Restart Loupedeck software
- If Loupedeck Software cannot retrieve Lightroom configuration:
    - Run Loupedeck software from Lightroom Help-menu: Plug-in Extras -> Loupedeck Setup
- When Lightroom is not running Loupedeck gives limited keyboard functions:
    - Left/Right arrows jump one word / one space at the time
    - Zoom = letter Z
    - Full Screen = F

Known issues (Capture One):

- To use Loupedeck, before first use the Shortcut file must be manually selected:
    - Edit menu -> Keyboard Shortcuts

- If Capture One doesn't have permission to create the Loupedeck shortcut file (i.e folder is write protected) Capture One will crash.
    - Change write access to the following folders: /Users/<User>/Library/Application Support/Capture One/KeyboardShortcuts
